ODU MEDI-SNAP

Introduction

LP-Locking Concept
Keying with Pin and Groove

ODU-MEDI-SNAP: Plastic Connector with Push-Pull-Locking

Cylindrical Connectors are generally available with several locking mechanisms:

The most frequently used are:

- Threaded-Locking Sleeve
- Bayonet-Locking
- Push-Pull-Locking

Push-Pull-Connectors have a very simple locking mechanism:

Pulling on the cable or on the back nut causes the "jaws" to grip harder into the groove in the receptacle. A separations is virtually impossible.

Pulling on the outer plug housing disengages the "jaws" from the receptacle groove and the connector separates easily.

- Quick and easy mating and demating
- Easy blind mating in difficult to-reach places
- Less panel space required
- Definite and secure locking condition
- Less mating force required

Important Issues At A Glance:

- **Connector with plastic housing (PSU or PEI)**
Outside diameter 14 mm.
Number of contact positions: 2 to 14 positions.
- **Available with solder or print termination**
- **Operation temperature: - 50 °C - + 120 °C**
Short term (e. g. for autoclaving) up to + 140 °C
- **Sterilization of connectors:**
 - Housing material PEI: Autoclaving/Steam Sterilization
- **More than 2.000 mating cycles**
- **Mating compatible to many Redel^{®1)} types of Series 1P** (tests are necessary)
- **Economic connector solution:**
 - Easy connector mounting (blind mounting)
 - Cost-effective solutions
- **Further Advantages:**
 - 100 % touch proof
 - Light-weight
 - Low mating forces
 - Non magnetic
 - Autoclavable, chemically resistant

¹⁾ There is no licence agreement or cooperation with Redel[®]

Applications

Primary Application: Medical Electronics

More Applications:

- Test and Measurement
- Consumer Products
- Commercial Electronics
- Industrial Electronics

Straight Plug, Style 1, IP 50

Receptacle, Style 1, IP 50

Other styles see on page 18 to 19

In-Line Receptacle, Style 1, IP 50

Mating Force, Demating Force and Pull-Off-Force

Mating Force: 3 N *

Demating Force: 4 N *

Pull-Off-Force: 90 N *

* Average of a series of measurements.
Housing (PSU) only, no contacts

Housing Materials and Surfaces

Material		
Component parts	Designation	Surface
Housing Back Nut Cable Collet Front Nut	→ PSU * Polysulfon → PEI * Polyetherimid	
Insulation body	→ PEEK Polyetheretherketon	
Hex Nut	→ Brass	→ Ni 4 - 8 µm
Contacts	→ Brass see next page	

* The material of plastic parts (except insulation bodies) varies by individual versions (please refer to page 25) either PSU or PEI.

Plastic Materials

	Norm	Unit	PSU	PEI	PEEK
Flammability rating	UL 94		V-0/4.5	V-0/0.41	V-0/1.5
Operating temperature		°C	-50 bis +170°C	-50 bis +170°C	-50 bis +250°C
Dielectric Strength	D149 / IEC 60243-1	kV/mm	17	27/1.6 (in oil)	19
Creepage distance acc. to CTI	IEC 60112	V	150	150	175
Water absorption	ASTM D570 / ISO 62	%	0.3	1.25	0.1
Sterilization/Autoclaving	DIN EN 13060	Quantity	~20	>200	>200

Contacts

Contacts are available in 0.5 to 1.3 mm diameter.

The contacts are available with following terminations:

- **Soldercup**
- **Print PCB**
- **Crimp**

Standard Socket Contact

Solder termination

Print termination

Crimp termination

(Availability, please see page 24)

(Ejection tool see page 34)

Contact Guiding Solder/Print

Optimized pin guiding due to chamfer on the insulation body. Malmating is avoided.

Contact Guiding - Crimp

Optimized pin guiding due to closed chamfer on the contact. Malmating is avoided.

Mating cycles: > 5000
Material: Brass
Surface finish: Ni, Au

**Information for diameter, termination styles and current load
can be found on Page 24**

ODU MEDI-SNAP

Part Number Key Dimensions and Contact Configurations

**Example:**

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
S	1	1	M	A	7	-	P	0	6	M	F	D	0	-	5	2	4	0

Plug – style 1 – size 1 – Coding 40° - PSU-Housing (grey) – 6-way PEEK Insulator – Pin (solder) Au
 – AWG 26 – cable diameter 4,0 to 5,2 mm – colour coding (back nut) yellow

* If in field number 4 there is a M, it can be seen right away that this product is a Push-Pull Connector of the MEDI-SNAP series.

Customer specific solutions for ODU MEDI-SNAP

ODU as a specialist for customized solutions have all the main competences in house.

Development, an own tool shop, stamping, molding, surface plating, manufacturing of complete assembly machines etc. etc. .

With all these possibilities we are able to offer "coustom tailored" solutions for our customers.

When do we actively pursue customer specific solutions?

First we have to study the customers requirements. Here we would appreciate a precise technical specification and figures on quantities!

With all this information we decide whether we take this project or not.

Most important is that the project potential will justify all the effort we have to put in!

After all these questions are clarified we are ready to go.

Here are a few examples how a special solution may look like:

Disposable Receptacle (Single use). Housing and insulator is a one-piece-part.

Disposable Right-Angle-Plug (Two-piece-part) without latching. Incl. cable collet.

ODU MEDI-SNAP

Technical Information about ODU MEDI-SNAP

Current Load of Contacts

Nominal Single Contact Current Load for pin / socket

(Nominal diameter 0,5 mm - 1,3 mm)

→ Upper Maximum Temperature for Standard Contacts: + 120 °C

Test contact was terminated to largest possible conductor.

Connectors or cables with more than one contact or conductor generate a higher heat than a single contact. Therefore, a **Derating Factor** must be applied. For connectors the Derating Factor is applied according to VDE 0298-4 (2003). The Derating Factor is used starting with 5 loaded wires.

Derating Factor:

Number of loaded wires	Derating Factor
5	0,75
7	0,65
10	0,55
14	0,50

Operating voltage acc. to SAE AS 13441-method 3001.1 (1998)

The values acc. to SAE AS 13441-method 3001.1 comply with MIL-Std. 1344 – method 3001.

The chart values results are acc. to IEC 60512. The inserts have been tested in mated condition and the test voltage was applied to the pin insert.

75% of the measured break-down voltage is the basic for the further calculation. 1/3 of this value is the corresponding operating voltage.

All tests were performed at standard environment conditions (room temperature) and can be applied up to an altitude of 2000 m.

For any deviations one has to consider the reduction factor acc. to the relevant standards.

Test voltage: Break-down voltage x 0,75
Operating voltage: Break-down voltage x 0,75 x 0,33

Caution:

Electrical appliances: for various applications the safety requirements regarding the operating voltage is even more severe!

The relevant datas in such cases for the operating voltage are the creepage and clearance distances. For any advise how to choose the proper connector please consult us and indicate the safty standard which your product has to meet.

Chemical Resistance

Adhesives, cleaners, or other chemicals are used on our products in a large number of further processing steps.

Inappropriate chemicals may chemically damage the material structure and result in material breakage of the plastic bodies.

Please follow our processing recommendations and technical instructions in this catalog.

Plug Assembly Instructions

1. Slide back nut and collet over the cable

2. Strip cable and wire ^{*1}
3. Pre-tinning of strands recommended

4. Solder each wire to the corresponding contact
Recommended cleaning agent:
Isopropyl Alcohol

5. Slide the collet against insert.
Caution: Don't damage the contacts!

6. Now you can put the assembled cable into the housing.

7. Screw back nut on the plug and fasten cable in the housing.
The plug is assembled.

Torque of max. 0,25 Nm

Recommended Stripping Length ^{*1}

Recommended glue for the Back Nut:
Scotch Weld DP 190
ODU P/N: 890.204.000.030.025

Right-Angle Plug Assembly Instructions

1. Slide back nut, collet and right-angled part over the cable.

2. Strip cable and wire *1
3. Pre-tinning of strands recommended
4. Solder each wire to the corresponding contact
Recommended cleaning agent:
Isopropyl Alcohol

5. Slide the right-angled part against the insert.
Attention: Do not damage the contacts..

6. Slide the collet into the right-angled part and screw it with the back nut.
Now you can put the assembled connector into the plug housing.

7. Mount the back screw on the plug
Now the plug is assembled.

Recommended Stripping Length *1

Recommended glue for the Back Nut
and for the Back Screw:
Scotch Weld DP 190
ODU P/N: 890.204.000.030.025

Assembly Instructions for In-Line Receptacle

1. Slide back nut and collet over the cable

2. Strip cable and wire ^{*1}
3. Pre-tinning of strands recommended

4. Solder each wire to the corresponding contact
Recommended cleaning agent:
Isopropyl Alcohol

5. Slide the collet against insert.
Caution: Don't damage the contacts!

6. Now you can put the assembled cable into the housing.

7. Screw back nut on the In-Line Receptacle and fasten cable in the housing.
In-Line Receptacle is assembled.

Torque of max. 0,25 Nm

Recommended Stripping Length ^{*1}

Recommended glue for the Back Nut:
Scotch Weld DP 190
ODU P/N: 890.204.000.030.025

International Protection (IP) Classes DIN EN 60 529/VDE 0470 T1)

The housing and the locking system of the ODU MEDI-SNAP protect the contacts against outside mechanical influence, such as impact shocks, impurities, dust, unintended contact and penetration of moisture, water or other liquids (coolants, oils, etc.).

Protection classification is indicated with the letters **IP** and two numbers.

IP: International Protection

Code letters (International Protection)		First Index Figure (Foreign bodies protection)	Second Index Figure (Water protection)
IP		6	8
Index	Degree of protection	Index	Degree of protection
0	 No protection against accidental contact, no protection against intrusion of solid foreign bodies	0	No protection against water
1	 Protection against contact with any large area by hand and against large solid foreign bodies with $\varnothing > 50 \text{ mm}$	1	 Protection against vertical water drips
2	 Protection against contact with the fingers, protection against large solid foreign bodies with $\varnothing > 12 \text{ mm}$	2	 Protection against water drips (up to a 15° angle)
3	 Protection against tools, wires or similar objects with $\varnothing > 2.5 \text{ mm}$. Protection, against small foreign solid bodies with $\varnothing > 2.5 \text{ mm}$	3	 Protection against diagonal water drips (up to a 60° angle)
4	 As 3 however $\varnothing > 1 \text{ mm}$	4	 Protection against splashed water from all directions
5	 Full protection against contact. Protection against interior detrimental dust deposition.	5	 Protection against water spray from all directions
6	 Total protection against contact. Protection against intrusion of dust	6	 Protection against temporary flooding
		7	 Protection against temporary immersion
		8	 Protection against water pressure

In accordance with DIN VDE 0470, DIN EN 60 529, IEC 529

Source: ZVEI = German Association of the Electrotechnical and Electronic Industry e.V.

Autoclaving of ODU MEDI-SNAP Connectors

If required ODU can deliver MEDI-SNAP connectors for the following sterilization process:
Steam-sterilization with pre-vacuum or gravitation-process. Connectors were tested with autoklave equipment with reference to DIN EN 13 060 at 134° C and 200 cycles (housing material PEI).

Sterilization Curve:

For other sterilization-processes please contact our technical support team.

Conversion: AWG to Metric

AWG = American Wire Gauge

The AWG system describes the cross section of a wire using a gauge number for every 26 % increase in conductor cross section. With larger wire diameters, the AWG gauge numbers decrease; as the wire sizes increase, the AWG gauge numbers decrease.

Most wires are made with **stranded conductors**. Compared to solid conductors stranded wires offer higher durability, higher flexibility and better performance under bending and vibration.

Stranded wires are made from wires with smaller gauge sizes (higher AWG gauge number). The AWG gauge number of the stranded wire is equal to that of a solid conductor of the same size wire. The cross section of the stranded conductor is the sum of cross sections of the single conductors.

For example, a AWG-20 stranded wire of 7 AWG-28 conductors has a cross section of 0.563 mm²; an AWG-20 stranded wire with 19 AWG-32 conductors has a cross section of 0.616 mm².

Conversion Table AWG / mm²

Circular Conductor			
AWG	Diameter		Cross Section mm ²
	in	mm	
10 (1)	0,102	2,59	5,27
10 (37/26)	1,109	2,75	4,53

Quality Management

Technical Terms and Definitions

Air Gap

= Shortest distance between two conductive elements through the air.

Autoclaveable

(See page 50)

AWG

(See page 51)

Creepage Distance

= The distance measured across the surface of a dielectric between two contacts or a contact and a metal part. The longer the distance, the lesser the risk of damage or tracking. Minimum creepage distances are specified according to the operating voltage and the applicable isolation group.

Connector

= a component that allows the connection of electrical conductors and that is intended to set up connections and/or to disconnect them with a suitable mating component. Connectors are operating materials that are not permitted to be inserted or separated during the intended use (when energized). The connector consists of the connector housing and the contact elements.

Plug-and-socket device

= operating materials that are permitted to be inserted or disconnected during the intended use (when energized or electrically charged).

Delivery

Connectors are shipped unassembled.

Exception: Solder contacts are factory-installed in the insulation body.

Fixed Connector

= A connector for attachment to a rigid surface (panel).

Free Connector

= A connector for attachment to the free end of a wire or cable. Also called free hanging connector or inline receptacle.

Insertion Or Withdrawal Force

= The force required to fully mate or unmate a set of connectors without the effect of coupling, locking or similar devices. The insertion force is usually greater than the withdrawal force. Also called mating and unmating force.

Insulation Body

= Non-conductive part of a connector, to electrically and mechanically separate live parts and to protect against accidental touch.

Keying

= System of projections and grooves on mating connectors which prevent otherwise identical connectors from being mated. This is useful when several connectors of the same style are used in the same application.

Lower Limit Temperature

= The lowest permissible temperature which a connector or a plug-in device is allowed to be operated.

Materials

(see page 9).

Mating Cycles

= Mechanical operation of connectors by mating and demating. One mating cycle comprises one insertion and one withdrawal operation (see page 7).

Nominal Single Contact Current Load

= Current load, carried by a single contact (see page 44).

Nominal Voltage

Nominal voltage for a component.

Operating Temperature of the ODU MEDI-SNAP

= Range between upper and lower temperature limits.
- 50 °C to + 120 °C (see page 44)

Print Connection

(see page 10)

Printed Circuit Board

Boards, typically made of epoxy-filled glass fiber fabric, with conductive pattern on one or both sides, or in case of multilayer boards, also imbedded inside the board. They feature metallized holes for soldering wire-mounted components or for the insertion of resilient or rigid press-in pins or instead, pads for attaching components using surface mount technology (SMT).

Reference Current

= The current at which a connector can be operated permanently simultaneously through all contacts without reaching maximum temperature.

Solder Termination

(see page 10)

Termination cross-section

The indicated cross-sections correspond to a flexible conductor design in accordance with EN 60228:2005 class 5 or to a flexible conductor design (7/19 strands) in accordance with AWG (ASTM B258-02).

Termination techniques

= Methods for connecting a wire to an electro-mechanical component, e.g. solderless connection according to IEC 60352: respectively such as crimp, press-in etc. or solder connections.

Upper Limit Temperature

= highest permissible temperature at which a connector or a plug-in device is allowed to operate. This temperature includes the self-heating and the ambient temperature. At ODU MEDI-SNAP + 120 °C (see page 40).

Watertightness

(See page 49)

Wire

= Wires may be provided with an insulation cover, an electrical shielding. Cables or conductors may consist of one or more wires.

Connectors shown in this catalogue are designed to operate at high voltages and high frequencies. Care must be taken to assure that no person can come in contact with live conductors during installation or operation of the connectors.

ODU assured that at the time of print all information in this catalog was correct. ODU reserves the right to change design and performance of any product to meet changing technical developments without prior notice. ODU reserves the right to discontinue any part in this catalog without prior notice and without obligation to continue production.
